

LEESHARAM (ALEX) RAJCOOMAR

Brampton, ON | (647) 471-3023 | a2rajcoo@uwaterloo.ca | [linkedin.com/in/leesharam-rajcoomar](https://www.linkedin.com/in/leesharam-rajcoomar) | alexrajcoomar.github.io
Available for a January to April 2027 co-op work term

EDUCATION

University of Waterloo, School of Accounting and Finance

Waterloo, ON

Bachelor of Accounting and Financial Management (Honours, Co-op), Analytics stream

Sep 2024 to Apr 2029 (expected)

- Merit Scholarship
- **In progress, Fall 2026:** Accounting Information Systems; Cost Management Systems; Intermediate Financial Accounting 1; Personal Financial Planning and Taxation
- **Completed:** Introduction to Performance Analytics (Tableau); Analytic Methods for Business 1 to 3; Introduction to Computer Science; Introduction to Tax; Introduction to Assurance
- DECA Finance, provincial competitor (2022 to 2024); UWNRG Nanorobotics Group, Business Associate (Winter 2025)

EXPERIENCE

Taxwise Inc.

Mississauga, ON

Tax Associate (Co-op)

Jan 2026 to Apr 2026

- Processed 200+ client files through a fixed-deadline production cycle in DT Max, normalising incomplete source documentation into a structured return and holding throughput through the season's peak
- Reconciled every file to its underlying records before release, clearing exceptions between client-reported figures, CRA Auto-fill my return data and third-party slips, and resolving the balance differences that fell out
- Owned client intake and correspondence for the file load, including authorization requests and written explanations of amounts owing, and kept a queue of 200+ files auditable end to end
- Worked the season inside DT Max and CRA's Represent a Client and Auto-fill my return systems, which is where the case for automating the mechanical half of a reconciliation came from

INDEPENDENT RESEARCH AND BUILDS

alexrajcoomar.github.io

Author, publisher and sole engineer of a reproducible research platform

2026 to Present

- **The tax base nobody discloses:** built a Python valuation module that reconstructs Dollarama's tax base across seven CCA classes, rolls the allowance forward under statutory rates, builds a 5.56% WACC from a regressed beta and the issuer's own debt tranches, and discounts free cash flow under two capital anchors returning **\$187.16 and \$125.14 per share** against a \$183.50 market price. Nothing is typed in: every figure is recomputed on each build and the build fails if page and model disagree
- Designed and ship the platform itself: **14,719 lines of Python** and 5,222 of JavaScript, standard library only, driving a CI pipeline that measures each page in a real browser, runs a register of automated checks, deliberately falsifies each check to prove it still catches failure, and blocks the deploy on any break
- Publish **67 pieces, 25 of them independent research**, with 188 figures, 799 data tables and 7 interactive tools, every figure carrying its source and every derived number labelled as derived
- **Flagged in Hindsight:** ran the **Beneish M-Score** as an ex ante screen on five Canadian accounting frauds, found that none of the three computable test years crossed the standard cut-off, and published the script and inputs so the negative result can be reproduced and attacked

PROJECTS AND COMPETITIONS

Pet Valu Strategic Growth Case, team of four

2025

- Built three-year pro forma models for two capital deployment strategies behind a **\$575M** expansion decision, stress-testing ROA, debt to EBITDA and net profit margin under aggressive and conservative growth assumptions
- Recommended conservative expansion to a simulated CEO and CFO panel on a **sustained 16% ROA** against a decline from 17% to 10% under the aggressive case, benchmarked against PetSmart and Petco

UW CISA Interactive Business Dashboard Competition, team of four

2024

- Built the competition dashboard in **Tableau** and Excel from multi-variable performance datasets analysed in R, and presented the competitive gaps the data exposed as a short set of specific operating recommendations

ADDITIONAL

- **Modelling:** three-statement pro formas; DCF and WACC build-up; capital cost allowance and UCC roll-forwards; scenario, sensitivity and covenant stress-testing; regression-based beta estimation
- **Technical:** Python; JavaScript; Tableau; Excel; R; Git and GitHub Actions; CI pipelines; automated data reconciliation and verification; browser-based measurement and testing
- **Finance and reporting systems:** DT Max; SEDAR+; Knotia; IFRS as adopted in Canada (Part I); ASPE (Part II)
- **Volunteering:** Habitat for Humanity ReStore (Jul to Sep 2023): recorded sales and reconciled daily revenue
- **Interests:** capital cycles; forecasting and calibration; the science of learning
