Available for a January to April 2027 co-op work term

[Date]

[Hiring contact name]

[Firm name]

[City, Province]

Dear [Hiring contact name],

I am applying for the [exact posting title], WaterlooWorks posting [ID], at [firm name]. I am a second-year Accounting and Financial Management student at the University of Waterloo, available full time from January to April 2027. I have already worked a complete Canadian personal tax season, preparing and reviewing 200+ T1 returns in DT Max, so I can be billable in the first week of the term rather than the fourth.

Most people who can write the code cannot read a deferred tax note, and most people who can read it cannot write the code. I do both, and the evidence is public: 14,719 lines of Python behind a research platform that recomputes every figure it publishes and refuses to deploy when the page and the model disagree. The reconciliation instinct came from a tax season where 200+ files had to agree to their source slips before release, and the automation instinct came from watching how much of that reconciliation was mechanical. [One sentence on the workflow this role would automate.]

Everything above is published at alexrajcoomar.github.io, where every figure names its source, every derived number is labelled as derived, and the build refuses to publish if a number does not match the data behind it. I would rather be checkable than impressive, and I expect to be asked how I know something.

I would welcome the chance to discuss the role with you. I can be reached at a2rajcoo@uwaterloo.ca or (647) 471-3023.

Sincerely,

Leesharam (Alex) Rajcoomar
